LAND UNIT DESCRIPTIONS

PLAINS

- 8P1** Level plain with many ferruginous gravels on surface. Moderately deep, red, loam, containing ferruginous fragments. *Aristida contorta*, *Dactyloctenium radicans* and *Sporobolus australasicus* low open tussock grassland
- 8P2** Level to gently undulating plain with territaria microrelief. Shallow, brown, loam grading to clay loam. *Aristida inaequiglumis* and *Eriacne obtusa* tall open tussock grassland with *Corymbia apparrerijia* isolated clumps of trees
- 8P3** Level plain with loose surface conditions. Deep, sand grading to red, massive, sandy loam. *Aristida holathera*, *Aristida inaequiglumis* and *Chrysopogon fallax* mid tussock grassland
- 8P4** Level plain with territaria microrelief. Moderately deep, loamy sand grading to red, massive, clay loam. *Aristida hygrometrica*, *Chrysopogon fallax* and *Aristida holathera* mid tussock grassland
- 8P5** Level plain. Shallow, brown, loamy sand grading to sandy loam. *Eucalyptus victrix* low open woodland
- 8P6** Level plains and low rises of quartz and limestone outcrops. Shallow, sandy loam, containing many quartz and calcrete fragments. *Eriacne obtusa*, *Aristida holathera* and *Enneapogon purpureus* mid tussock grassland
- 8P7** Level to gently undulating plain. Moderately deep, red, loamy sand grading to clay loam. *Corymbia terminalis*, *Hakea arborescens* and *Ventilago viminalis* low open woodland
- 8P8** Level plain with territaria microrelief. Deep, red, sandy loam grading to clay loam. *Corymbia terminalis* and *Eucalyptus victrix* low open woodland
- 8P9** Level plain with territaria microrelief. Deep, loamy sand grading to red, massive, clay loam. *Triodia schinzii* and *Paraneurachne muelleri* tall hummock grassland

DRAINAGE SYSTEMS

- 10A1** Level plain, broad alluvial plain, with gilgai microrelief. Very deep, cracking, grey, clay. *Astrelia elymoides*, *Iseilema vaginiflorum* and *Polymeria longifolia* mid tussock grassland
- 10D1** Drainage channel. Moderately deep, brown, massive, sand. *Eucalyptus victrix*, *Atalaya hemiglauc* and *Acacia elachantha* low open woodland

INLAND WETLANDS

- 13S1** Closed drainage depression, with gilgai microrelief, subject to temporary inundation. Very deep, cracking, grey, mottled, clay. *Eulalia aurea* tall tussock grassland
- 13S2** Margin areas of drainage depression, with gilgai microrelief. Moderately deep, cracking, grey, clay. *Aristida latifolia*, *Eulalia aurea* and *Iseilema vaginiflorum* mid tussock grassland
- 13S3** Level plain, with many surface gravels. Very shallow, clay loam. *Aristida contorta*, *Aristida holathera* and *Fimbristylis dichotoma* low tussock grassland

DOWNS PLAINS

- 14G1** Level plain with gilgai microrelief. Very deep, cracking, grey, clay, gypsum and sodic at depth. *Astrelia pectinata*, *Aristida latifolia* mid open tussock grassland
- 14G2** Level plain with no gilgai microrelief. Very deep, imperfectly drained, cracking, grey, clay. *Iseilema vaginiflorum*, *Fimbristylis dichotoma* and *Chloris pectinata* low open tussock grassland

Map unit boundaries were derived using satellite imagery in association with digital elevation model, geological and topographic data. Landform, soil and vegetation field assessments conform to national standards and support mapping at a scale of 1:50 000. When assessing specific areas within the mapping it is recommended a site inspection be undertaken to establish unmapped variation and confirm mapping accuracy on the ground.
